ENGG1003 - Monday Week 8

Solving nonlinear algebraic equations

Steve Weller

University of Newcastle

26 April 2021

Last compiled: April 22, 2021 3:48pm +10:00

Lecture overview

1. Solving nonlinear algebraic equations pp. 175-176
   - generic
   - three problems: flight time, fluid level, resonant system
2. Bisection method §7.7
3. Secant method §7.3
   - Newton–Raphson method
4. Extensions
   - bisection vs. secant re-write as functions
   - timing code in Python
   - initialisation & speed comparisons
   - failure to converge

1) Solving nonlinear algebraic equations

- XXX

- XXX

2) Bisection method

- basic idea: visualisation

- bisection method: key equations

- bisection method: pseudocode

- bisection method: Python code

- bisection method: simulation results

3) Secant method

- basic idea: visualisation

- secant method: key equations

- secant method: pseudocode

- secant method: Python code

- secant method: simulation results

- XXX

4) Computing integrals

- XXX

- XXX

Lecture summary

- Solving nonlinear algebraic equations
- Bisection method
- Secant method
  - Newton–Raphson method
- Computing integrals
